

Install Ubuntu desktop

 ubuntu.com/tutorials/install-ubuntu-desktop

What you'll learn

In this tutorial, we will guide you through the steps required to install Ubuntu Desktop on your laptop or PC.

What you'll need

- A laptop or PC (obviously!) with at least 25GB of storage space.
- A flash drive (8GB as a minimum, 12GB or above recommended).

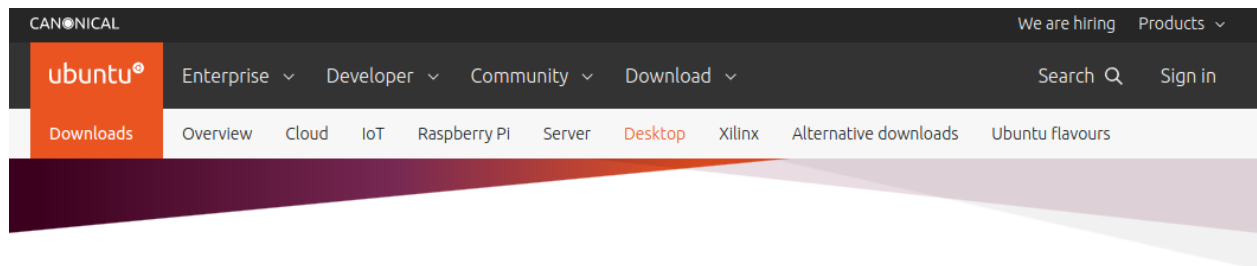

Whilst Ubuntu works on a wide range of devices, it is recommended that you use a device listed on the [Ubuntu certified hardware](#) page. These devices have been tested and confirmed to work well with Ubuntu.

If you are installing Ubuntu on a PC or laptop you have used previously, it is always recommended to back up your data prior to installation.

Install Ubuntu desktop

 ubuntu.com/tutorials/install-ubuntu-desktop

You can download an Ubuntu image [here](#). Make sure to save it to a memorable location on your PC! For this tutorial, we will use the Ubuntu 20.04 LTS release.

Download Ubuntu Desktop

Ubuntu 20.04.3 LTS

Download the latest LTS version of Ubuntu, for desktop PCs and laptops. LTS stands for long-term support — which means five years, until April 2025, of free security and maintenance updates, guaranteed.

[Ubuntu 20.04 LTS release notes](#)

Recommended system requirements:

- ✓ 2 GHz dual core processor or better
- ✓ 4 GB system memory
- ✓ 25 GB of free hard drive space
- ✓ Internet access is helpful
- ✓ Either a DVD drive or a USB port for the installer media

[Download](#)

For other versions of Ubuntu Desktop including torrents, the network installer, a list of local mirrors, and past releases [see our alternative downloads](#).

Ubuntu 21.10

The latest version of the Ubuntu operating system for desktop PCs and laptops, Ubuntu 21.10 comes with nine months, until July 2022, of security and maintenance updates.

Recommended system requirements are the same as for Ubuntu 20.04.3 LTS.

Install Ubuntu desktop

 ubuntu.com/tutorials/install-ubuntu-desktop

To install Ubuntu Desktop, you need to write your downloaded ISO to a USB stick to create the installation media. This is not the same as copying the ISO, and requires some bespoke software.

For this tutorial, we'll use [balenaEtcher](#), as it runs on Linux, Windows and Mac OS. Choose the version that corresponds to your current operating system, download and install the tool.

DOWNLOAD

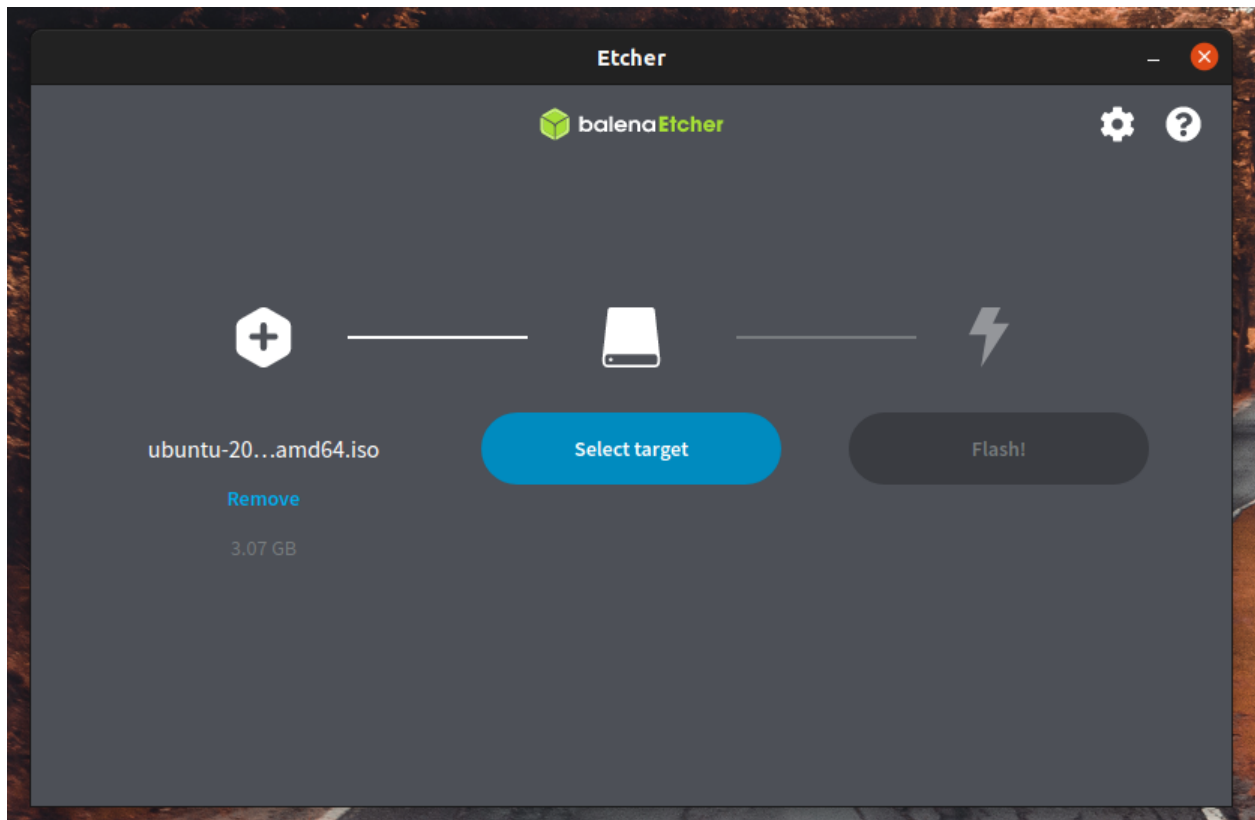

Get your assets

ASSET	OS	ARCH	
Etcher for Windows (x86 x64) (Installer)	Windows	x86 x64	Download
Etcher for Windows (x86 x64) (Portable)	Windows	x86 x64	Download
Etcher for macOS	macOS	x64	Download
Etcher for Linux x64 (64-bit) (AppImage)	Linux	x64	Download
Etcher for Linux x86 (32-bit) (AppImage)	Linux	x86	Download

Looking for [Debian \(.deb\)](#) packages or [Red Hat \(.rpm\)](#) packages?

If you prefer to use a different tool to create your USB, we also have tutorials for [Rufus](#) on Windows, [Etcher](#) on Mac OS and [Startup Disk Creator](#) on Ubuntu.

Select your downloaded ISO, choose your USB flash drive, and then click **Flash!** to install your image.

Installing Ubuntu from a DVD

It's also possible to install Ubuntu from a DVD instead of USB. Follow these guides to burn an Ubuntu installation DVD on [Windows](#), [MacOS](#) or [Ubuntu](#), then select the CD drive instead of USB device on the boot options screen in the following step.

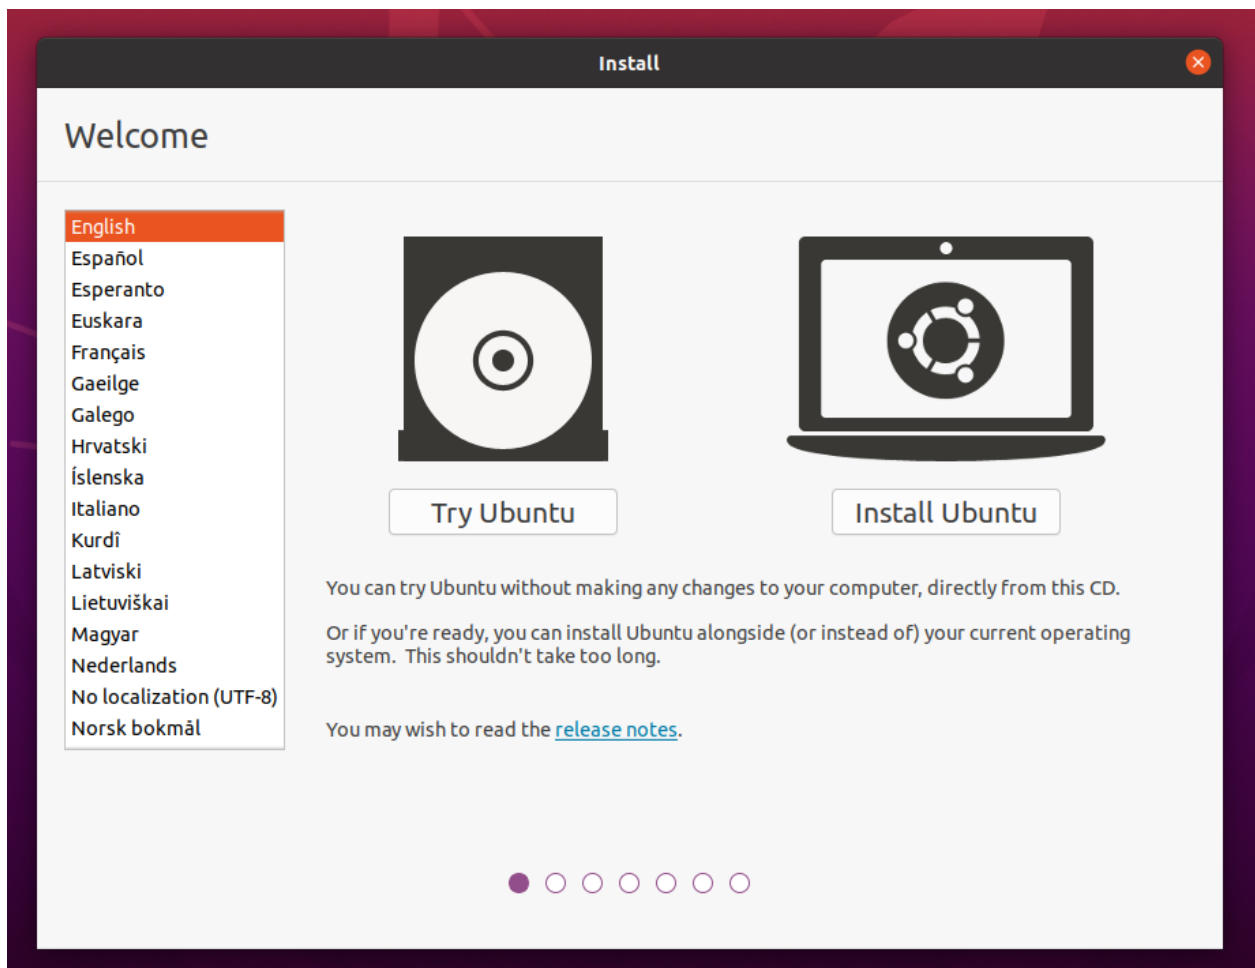

Install Ubuntu desktop

 ubuntu.com/tutorials/install-ubuntu-desktop

Insert the USB flash drive into the laptop or PC you want to use to install Ubuntu and boot or restart the device. It should recognise the installation media automatically. If not, try holding F12 during startup and selecting the USB device from the system-specific boot menu.

F12 is the most common key for bringing up your system's boot menu, but Escape, F2 and F10 are common alternatives. If you're unsure, look for a brief message when your system starts – this will often inform you of which key to press to bring up the boot menu.

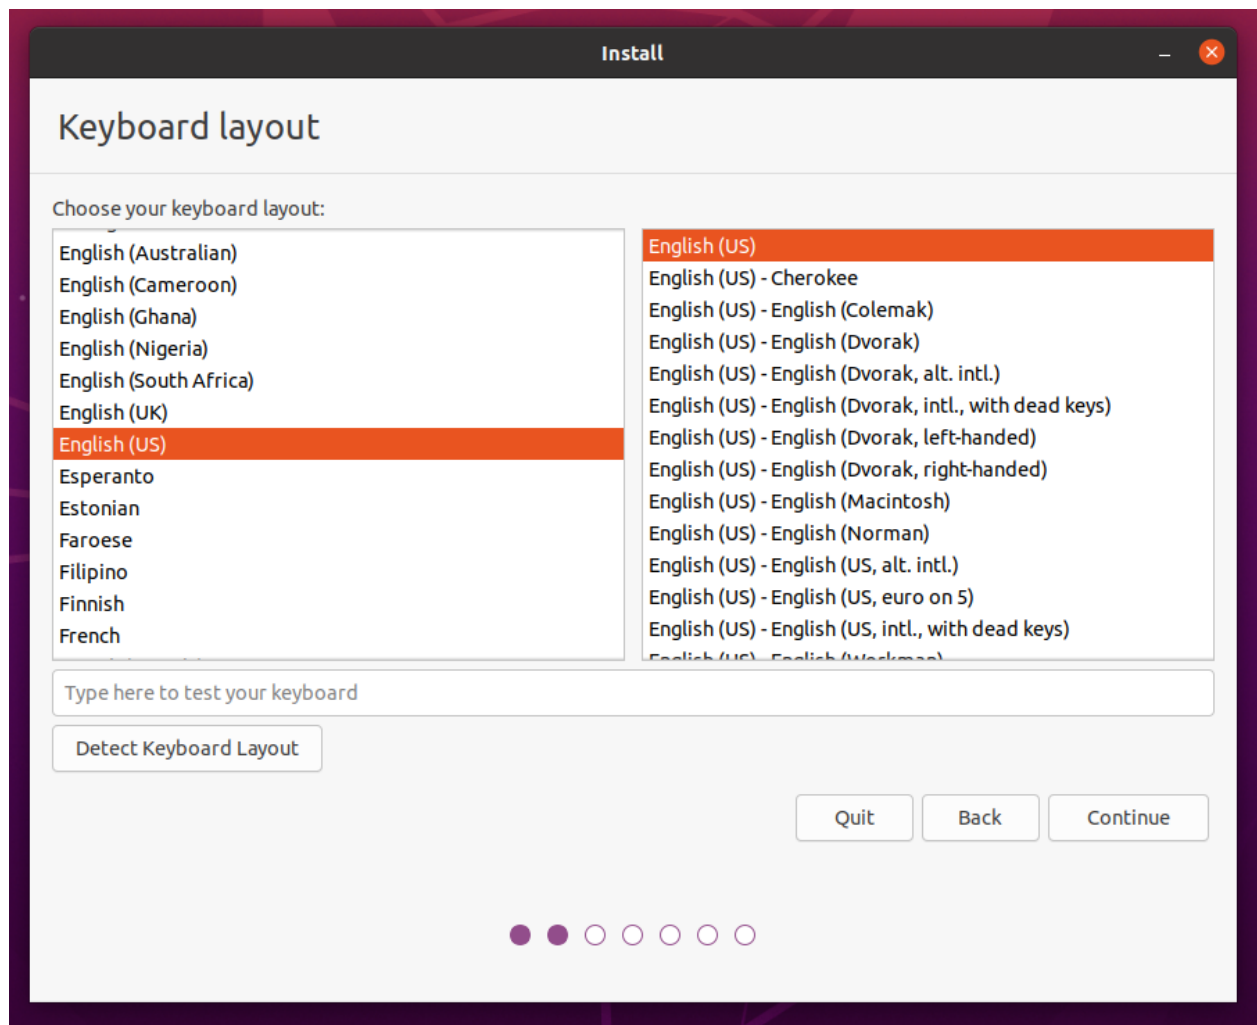

You should now see the welcome screen inviting you to either try or install Ubuntu.

If you click **Try Ubuntu**, you can preview Ubuntu without making any changes to your PC. You can return to the installer menu at any time by clicking the **Install Ubuntu** shortcut on the desktop.

To proceed, click **Install Ubuntu**.

You will be asked to select your keyboard layout. Once you've chosen one, click **Continue**.

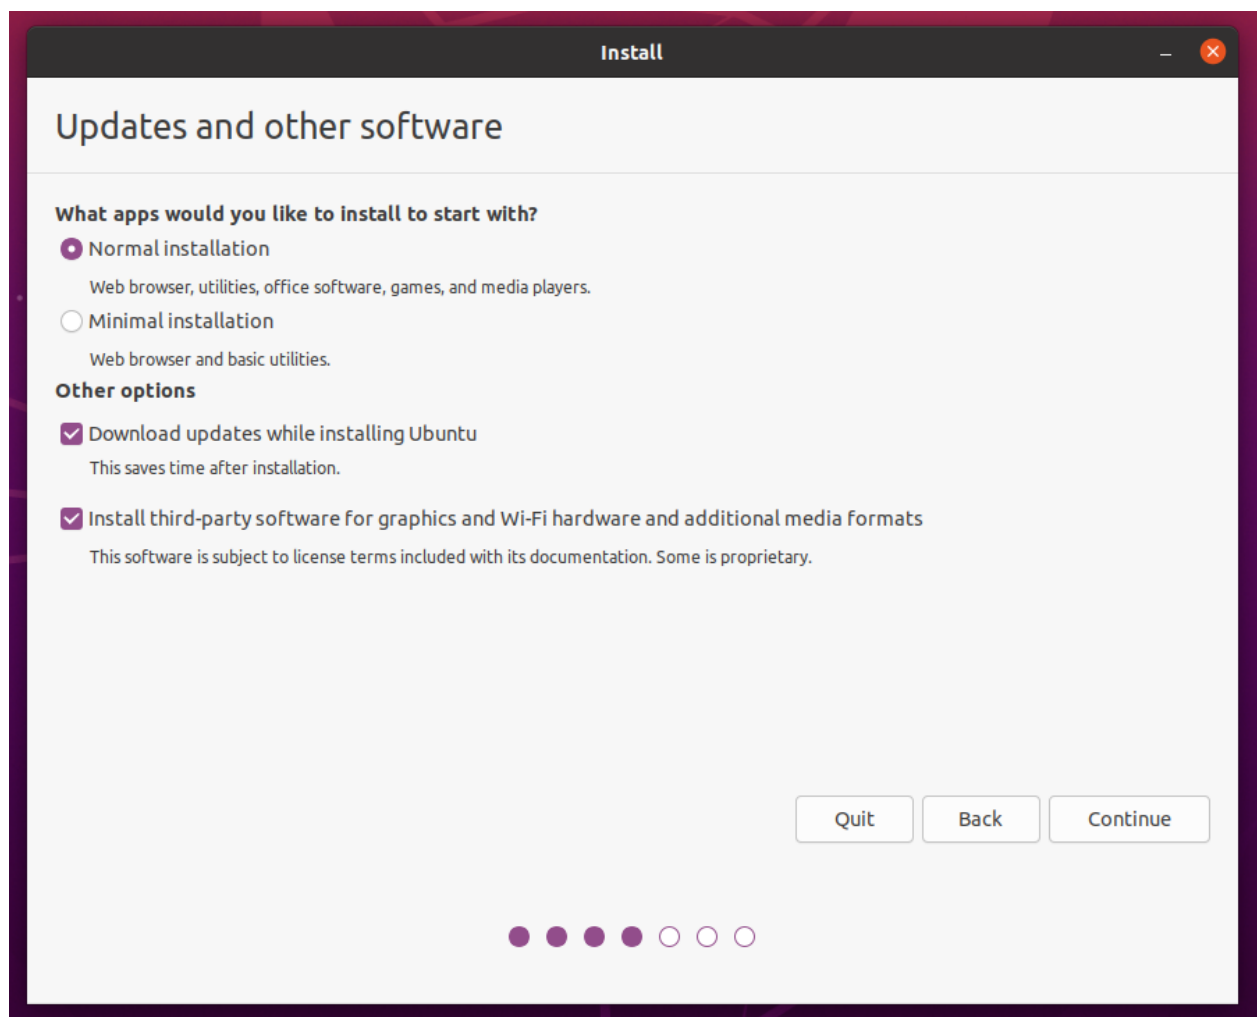

Install Ubuntu desktop

 ubuntu.com/tutorials/install-ubuntu-desktop

Next, you will be prompted to choose between the **Normal installation** and **Minimal installation** options. The minimal installation is useful for those with smaller hard drives or who don't require as many pre-installed applications.

In **Other options**, you will be prompted to download updates as well as third-party software that may improve device support and performance (for example, Nvidia graphics drivers) during the installation. It is recommended to check both of these boxes.

If you are not currently connected to the internet, you will be prompted to do so at this point. Ensure you are able to remain connected throughout the installation.

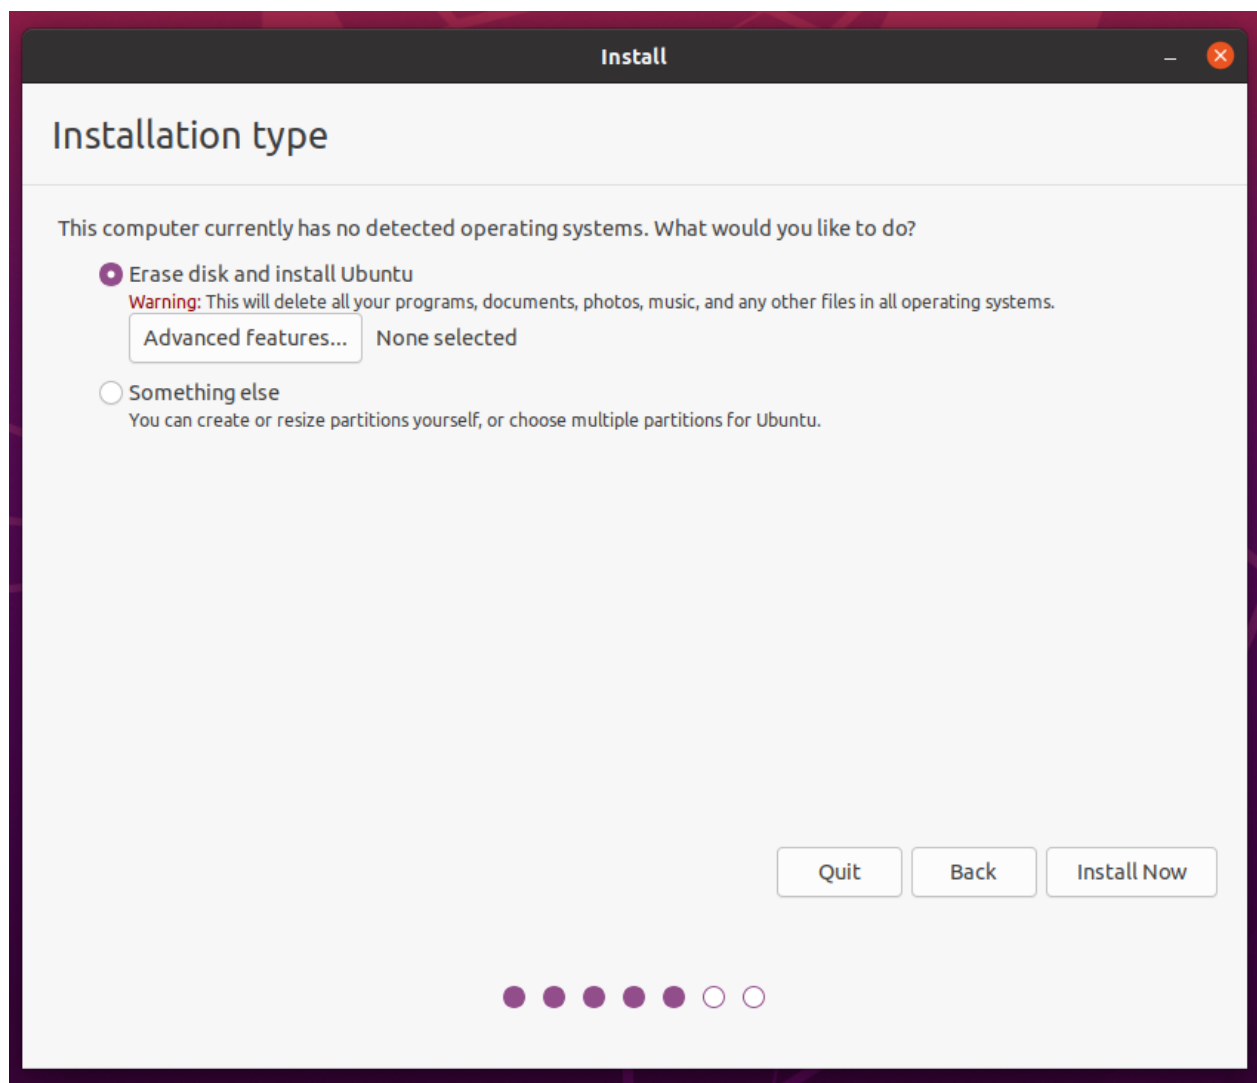

Install Ubuntu desktop

 ubuntu.com/tutorials/install-ubuntu-desktop

This screen allows you to configure your installation. If you would like Ubuntu to be the only operating system on your device, select **Erase disk and install Ubuntu**.

If your device currently has another operating system installed, you will receive additional options to install Ubuntu alongside that OS rather than replacing it. This requires some additional steps not covered in this tutorial. However, you can read more about setting up dual-booting in this [useful tutorial](#) on Dave's RoboShack.

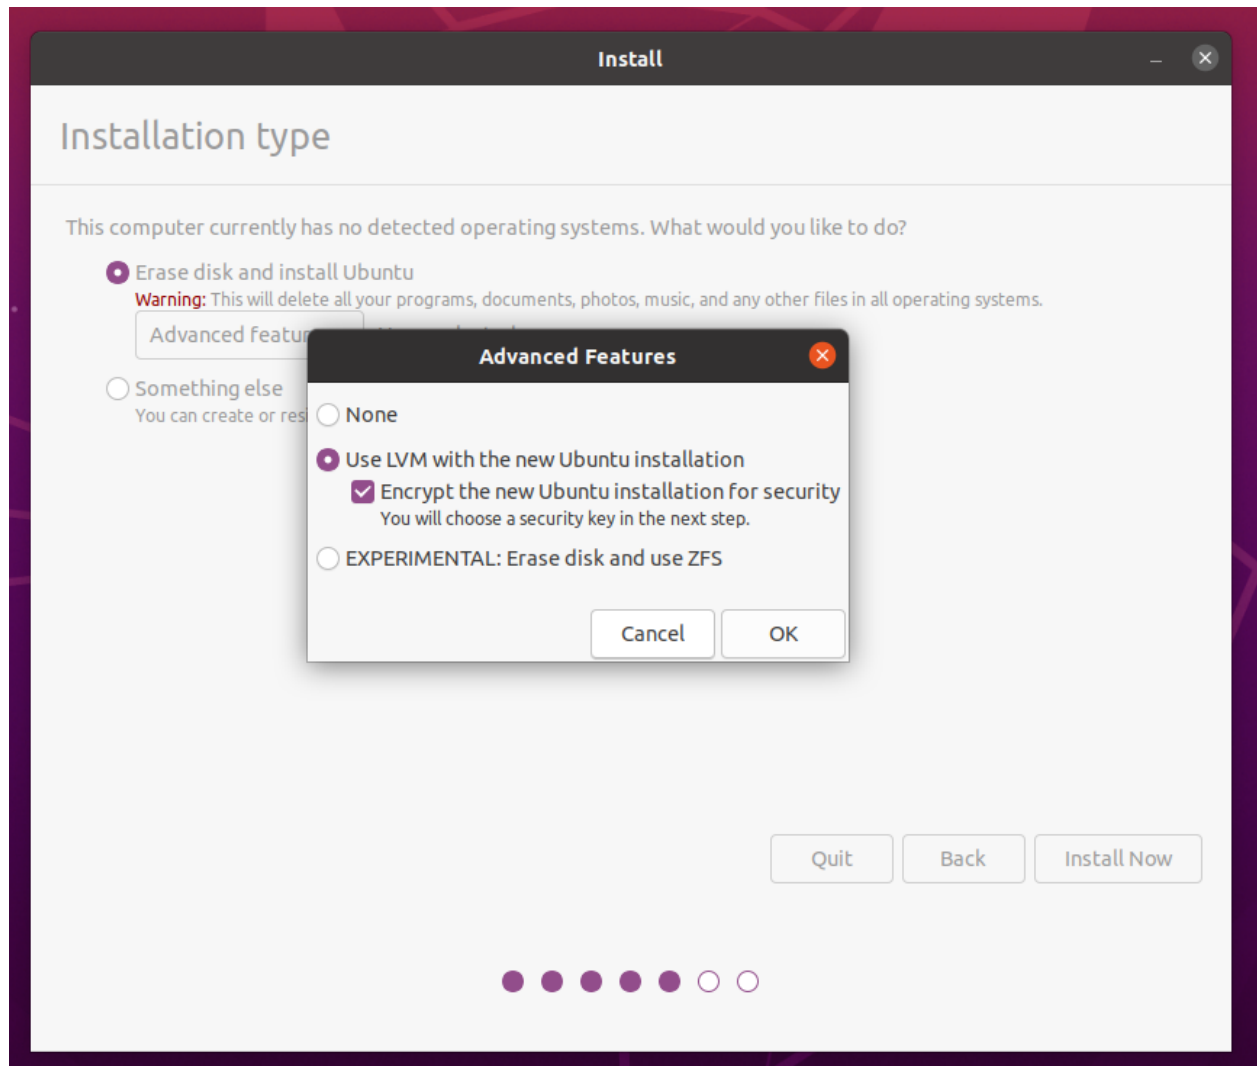

If you are happy to continue the installation *without* enabling encryption, click **Install Now** and confirm the changes with **Continue**. Otherwise keep reading.

Install Ubuntu desktop

 ubuntu.com/tutorials/install-ubuntu-desktop

If you would like to encrypt your device, select **Advanced features... > Use LVM with the new Ubuntu installation > Encrypt the new Ubuntu installation for security**.

LVM stands for Logical Volume Management. By using LVM during the setup, it makes it easier to create and manage partitions post installation.

You will be prompted to create a security key once you click **Install Now**.

If you select encryption, it is important that you do not lose your security key! Write it down and store it in a safe place outside of your local system. **You will not be able to recover your data without it!**

Install

Choose a security key:

Disk encryption protects your files in case you lose your computer. It requires you to enter a security key each time the computer starts up.

Any files outside of Ubuntu will not be encrypted.

Choose a security key:

●●●●●●●●●●●●●●●●

Good password

Confirm the security key:

●●●●●●●●●●●●●●●●

✓

☐ Enable recovery key:

A recovery key is generated and will be temporarily saved on the live system. You can select an alternate location. Save this file and keep it in a safe place elsewhere before rebooting.

Recovery key:

👁️🔄

Confirm recovery key:

Location:

/home/ubuntu/recovery.key

Warning: If you lose this security key, all data will be lost. If you need to, write down your key and keep it in a safe place elsewhere.

For more security:

☐ Overwrite empty disk space

The installation may take much longer.

Quit

Back

Install Now

●●●●●○

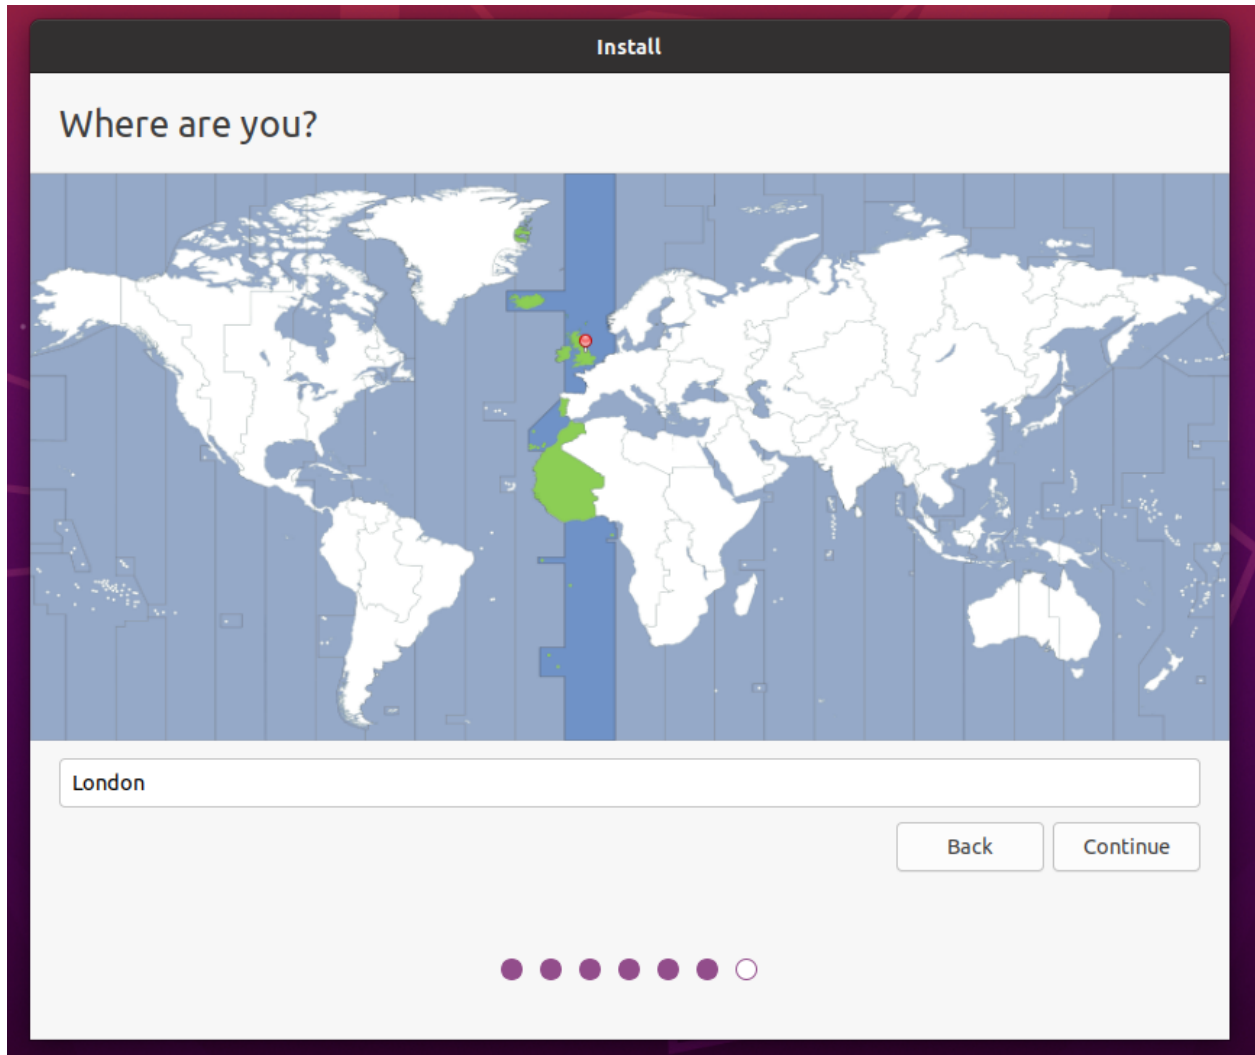

Click Install Now and confirm the changes with Continue.

2/3

Install Ubuntu desktop

 ubuntu.com/tutorials/install-ubuntu-desktop

Select your location and timezone from the map screen and click **Continue**. This information will be detected automatically if you are connected to the internet.

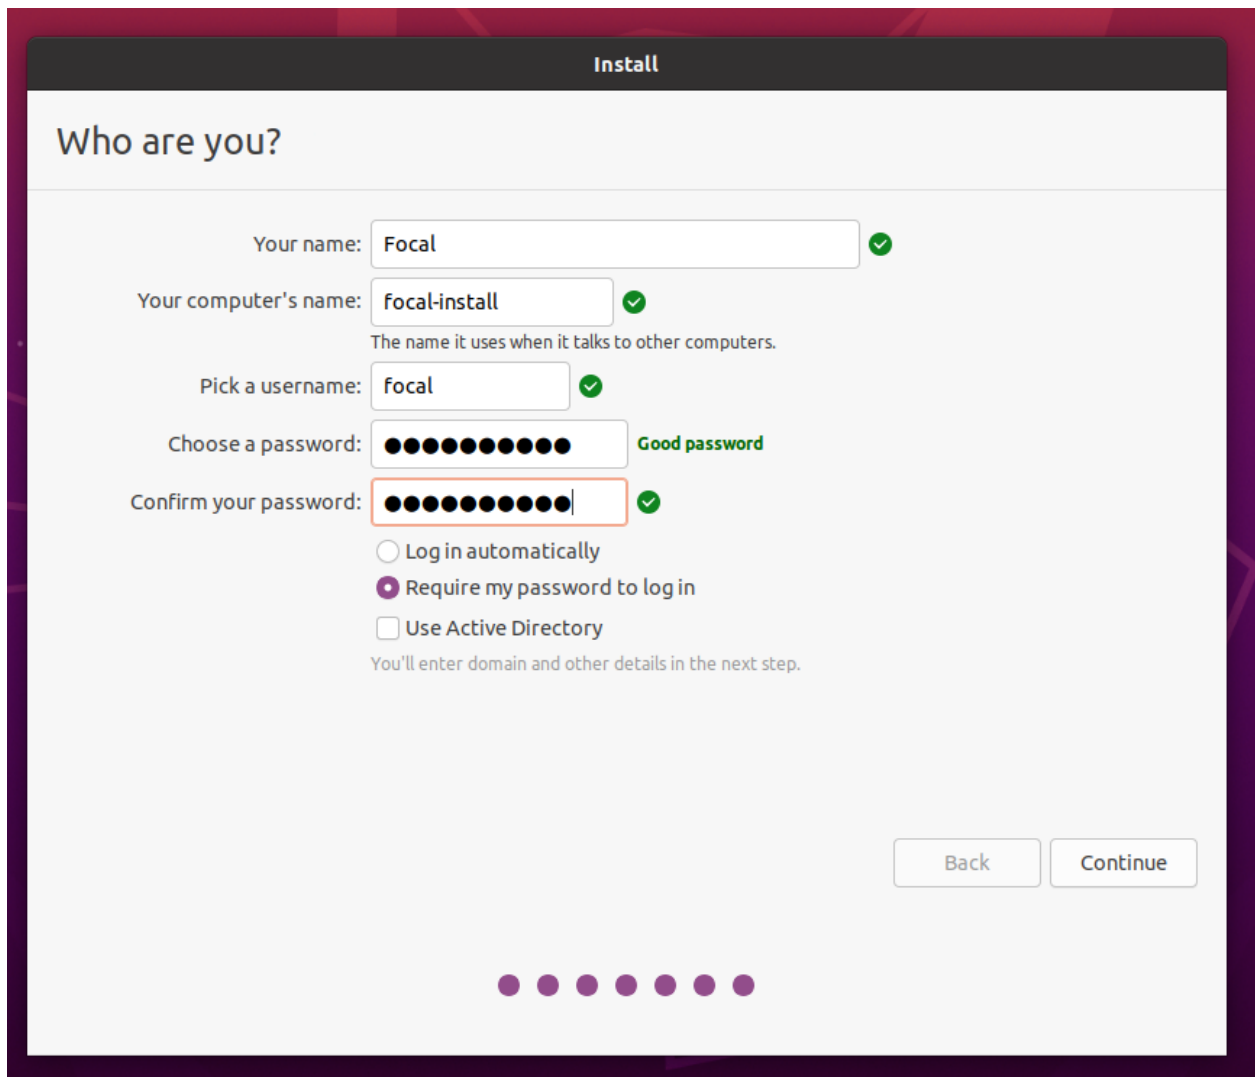

Install Ubuntu desktop

 ubuntu.com/tutorials/install-ubuntu-desktop

On this screen, you will be prompted to enter your name and the name of your computer as it will appear on the network. Finally, you will create a username and a strong password.

You can choose to log in automatically or require a password. If you are using your device whilst travelling, it's recommended to keep automatic login disabled.

The screenshot shows the 'Install' window titled 'Who are you?'. It contains the following fields and options:

- Your name:** Focal (with a green checkmark)
- Your computer's name:** focal-install (with a green checkmark). Below this is the text: 'The name it uses when it talks to other computers.'
- Pick a username:** focal (with a green checkmark)
- Choose a password:** [masked with dots] (with a green checkmark and the text 'Good password' to the right)
- Confirm your password:** [masked with dots] (with a green checkmark)
- Log in options:**
 - ☐ Log in automatically
 - ☒ Require my password to log in
 - ☐ Use Active Directory

Below the log in options is the text: 'You'll enter domain and other details in the next step.'

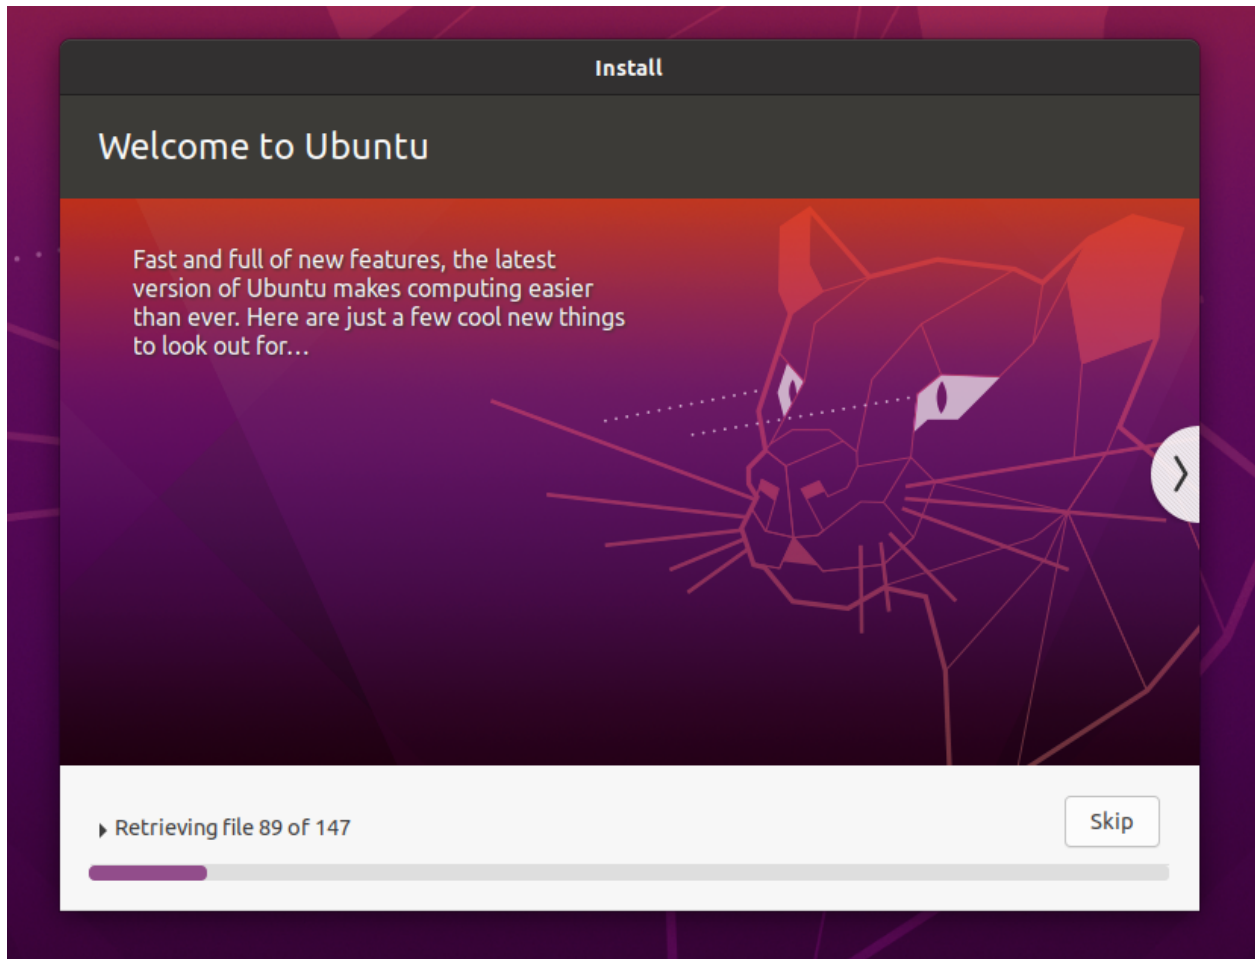

At the bottom right are two buttons: 'Back' and 'Continue'.

At the bottom center are seven purple dots, with the first one filled, indicating the current step in the installation process.

Install Ubuntu desktop

 ubuntu.com/tutorials/install-ubuntu-desktop

Now sit back and enjoy the slideshow as Ubuntu installs in the background!

Once the installation has completed, you will be prompted to restart your machine.

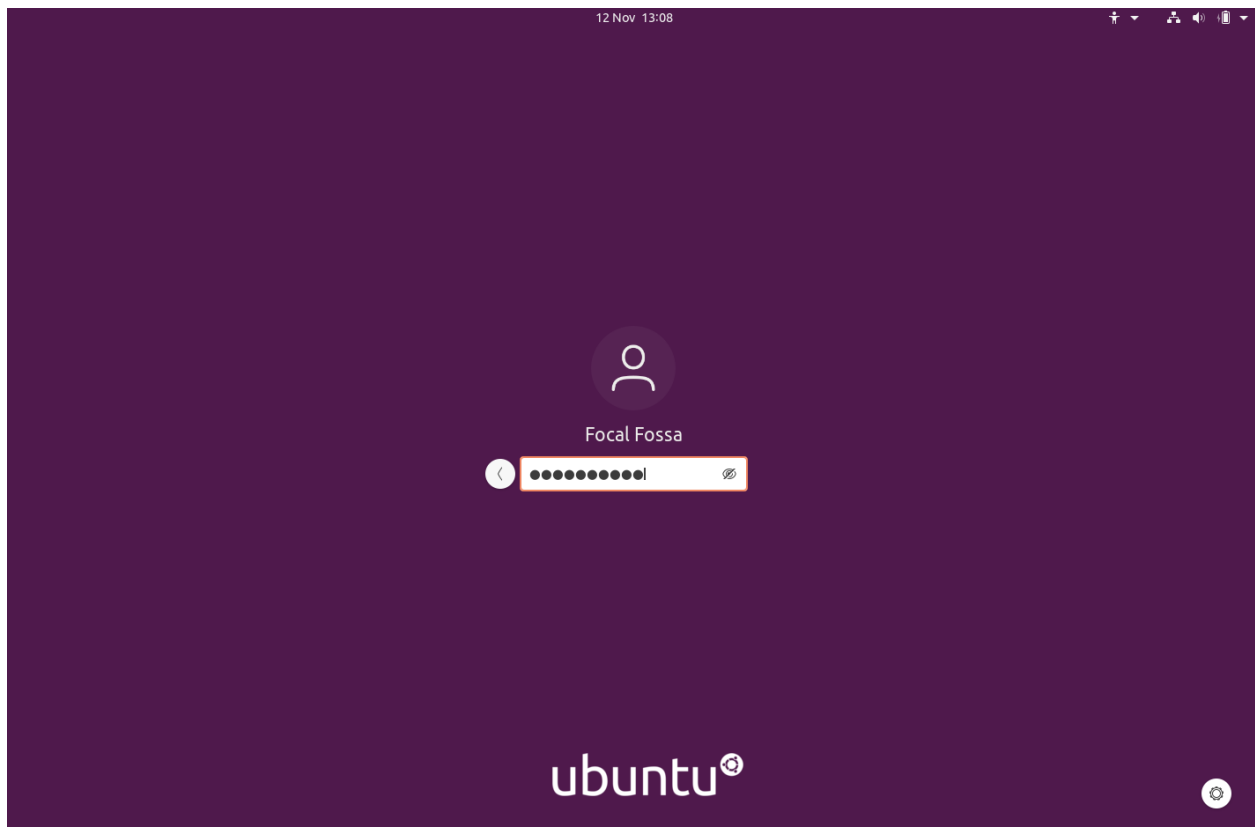

Click **Restart Now**.

When you restart, you will be prompted to remove your USB flash drive from the device. Once you've done this, press **ENTER**.

Enter your password on the login screen (assuming you selected that option when creating your login details).

And that's it, welcome to your new Ubuntu Desktop!

The welcome widget will help you with some additional setup options, including:

- Connecting your profile to various online accounts.
- Configure Livepatch to automatically apply updates to your device (this option is only available when using a long term support [LTS] version of Ubuntu).
- Opting into sending device information to Canonical to help improve Ubuntu (by default, Canonical doesn't collect device information).
- Activating location services.
- Downloading additional apps from Ubuntu Software.

Install Ubuntu desktop

 ubuntu.com/tutorials/install-ubuntu-desktop

It's always good practice to ensure your system is up to date, especially after a fresh install.

The easiest way to do this is via the **Software Updater** app. Search for Software Updater via the app menu (the icon with 9 squares in the bottom corner of your window) and it will check for updates and apply them.

You can also update Ubuntu using the terminal.

Press **CTRL+ALT+T** to bring up a Terminal window (or click the terminal icon in the sidebar).

Type in:

```
sudo apt update
```

You will be prompted to enter your login password.

This will check for updates and tell you if there are any that need applying. To apply any updates, type:

```
sudo apt upgrade
```

Type **Y**, then press **ENTER** to confirm to finish the update process.
